# 1 Bay Trail DFUDriverGen Tool User Guide

---

The GenSysFwUpdImage.exe tool is provided to create a dedicated IFWI image which contains only updatable BIOS image and SEC UPD image by adding several headers for firmware update.

The output of this tool is specified by the -out option. This output is later used by GenCapsule tool to create the BIOSUpdate.fv file.

## 1.1 Installation

Installation of GenSysFwUpdImage.exe tool is straightforward. Copy the GenSysFwUpdImage.exe file to the machine that this tool is to be run.

## 1.2 Run the Tool

The tool supports to be run in command mode only.

### 1.2.1 Command Mode

The tool runs in command mode if you specify any options as mentioned below:

#### 1.2.1.1 Mandatory Command Options

**-bios <Path to 3MB signed BIOS binary>**

This option is mandatory. The bios image should be signed already before using this tool.

**-sec <Path to SEC UPD image>**

This option is mandatory. Be aware you should always use the UPD image instead of 3MB SEC region file. Failing to do that will result in firmware update failure.

**-out <path to output file>**

This option is mandatory. Specifies the output file that the IFWI is written to.

##### 1.2.1.1.1 Sample Usage

```
>GenSysFwUpdImage.exe -bios VLV_BIOS_R_29_31_SecEnabled.ROM -sec  
VLV_SEC_UPD_REGION.bin -out VLV_SYS_FW_UPD.bin
```

#### **1.2.1.1.2 Sample Output**

The output of the tool is the file specified by -out option.

#### **1.2.1.2 Optional Command Options**

##### **-h**

Optional and cannot combine with other options. This option provides tool help. Will provide prompt of usage when specified as the only option to the application.

##### **1.2.1.2.1 Sample Usage**

```
>GenSysFwUpdImage.exe -h
```

#### **1.2.2 UI Mode**

This tool does not support to be run in UI mode.

### **1.3 Failure Case**

In case the tool failed to run, the tool will not generate the output file.
